**Members of Division 320,**

**RE: Train Inspections**

It has come to the Union's attention that the company is performing proficiency testing focussing on the inspection of passing trains, and at Crew Change locations.

Some of the tools being used are cameras at Crew Change locations and Locomotive nose cams. These cameras are being used to determine compliance with the rules. They have even used trailing Remote Locomotive nose cams to determine if crews are inspecting the entire train.

Please ensure you are doing your utmost to comply with these rules and instructions to ensure a safe operation. Do not expose yourselves to disciplinary action.

Sincerely,

Your Local Chairs
